NATIONAL FOREWORD

(Adoption clause will be added later)

This standard was first published in 2023 and was identical to ISO/TS 16791 : 2020 ‘Health informatics — Requirements for international machine-readable coding of medicinal product package identifiers’. This revision has been brought out to align it with the latest version of ISO 16791 : 2026.

The text of ISO standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions are however not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- Wherever the words ‘International Standard’ appear referring to this standard, they should be read as ‘Indian Standard’; and
- Comma (,) has been used as a decimal marker while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

In this adopted standard, reference appears to certain International Standards for which Indian Standards also exist. The corresponding Indian Standards which are to be substituted in their respective places are listed below along with their degree of equivalence for the editions indicated:

<i>International Standard</i>	<i>Corresponding Indian Standard</i>	<i>Degree of Equivalence</i>
-------------------------------	--------------------------------------	------------------------------

ISO 11615 Health informatics — Identification of medicinal products — Data elements and structures for the unique identification and exchange of regulated medicinal product information	IS/ISO 11615 : 2017 Health informatics — Identification of medicinal products — Data elements and structures for the unique identification and exchange of regulated medicinal product information	Identical
--	--	-----------

The Committee responsible for the preparation of this standard has reviewed the provisions of the following International Standards referred in this adopted standard and has decided that they are acceptable for use in conjunction with this standard:

International Standard	Title
ISO/TS 19256	Health informatics — Requirements for medicinal product dictionary systems for health care

Scope

This document provides requirements on identification and labelling of medicinal products from the point of manufacturing of packaged medicinal product to the point of dispensing the product.

This document outlines commonly accepted international practices for automatic identification and data capture (AIDC) barcoding solutions for applications and applies to manufacturers, distributors, healthcare facilities and all parties involved in labelling and distribution of packaged medicinal products. These users can, however, consider the coding interoperability requirements for other AIDC technologies, e.g. radio frequency identification (RFID); that technology is not addressed in this document except as for information.

The technical content of the document has not been enclosed as it is identical with the corresponding ISO standard. For details, please refer to ISO 16791 : 2026 or kindly contact:
