NATIONAL FOREWORD

(Adoption clause will be added later)

This standard supersedes IS/ISO 12052 : 2017 ‘Health informatics — Digital imaging and communication in medicine (DICOM) including workflow and data management (*first revision*)’.

The text of ISO standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions are however not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- a) Wherever the words ‘International Standard’ appear referring to this standard, they should be read as ‘Indian Standard’; and
- b) Comma (,) has been used as a decimal marker while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

Scope

Within the field of health informatics, the DICOM (digital imaging and communication in medicine) standard addresses the exchange of digital images, and information related to the production and management of those images, between both medical imaging equipment and systems concerned with the management and communication of that information, such as Picture Archiving and Communication System (PACS), Hospital Information System (HIS) and Radiology Information System (RIS).

This document is equivalent to part 1 of DICOM. As such, it normatively describes the content of DICOM and the requirements to make a claim of conformance.

The DICOM standard is applicable to diagnostic medical imaging as practiced in radiology, cardiology, pathology, dentistry, ophthalmology and related disciplines, and image-based therapies such as interventional radiology, radiotherapy and surgery. It is also applicable to a wide range of image and non-image related information exchanged in clinical, research, veterinary, and other medical environments.

The technical content of the document has not been enclosed as it is identical with the corresponding ISO standard. For details, please refer to ISO 12052 : 2026 or kindly contact:
